Claims 1-33 are currently pending and under examination.

The disclosure is objected to because of the following informalities: The specification at page 13 refers to a copending U.S. application that is identified only by serial number and filing date and that is "incorporated by reference". The present status thereof should be made known to the examiner. Applicant is reminded that incorporation by reference of *essential* material is proper only for U.S. patents and *allowed* applications, MPEP 608.01(p)(B), and is requested to clarify whether material disclosed in said copending application is essential to the instant claims within the meaning of 35 U.S.C. 112, 1st paragraph. If so, such material should be added by amendment directly into the text of the specification. The amendment must be accompanied by an affidavit or declaration executed by the applicant, or a practitioner representing the applicant, stating that the amendatory material consists of the same material incorporated by reference in the referencing application. See *In re Hawkins*, 486 F.2d 569, 179 USPQ 157 (CCPA 1973); *In re Hawkins*, 486 F.2d 579, 179 USPQ 163 (CCPA 1973); and *In re Hawkins*, 486 F.2d 577, 179 USPQ 167 (CCPA 1973).

Appropriate correction of the specification is required.

Claim 17 is objected to because of the following informalities: the word -forming- has been omitted after "polypropylene" in line 9. Appropriate correction is required.

Claims 9-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 16 provides the limitation to "the *propane* is removed from the unreacted by-product ...". There is inadequate antecedent basis for this limitation in the claims. In particular, note parent claim 9, step d), which calls for "recovering *propylene*" from the unreacted by-product. Thus, there is uncertainty as to which of these hydrocarbons is intended to be removed/recovered from said by-product. Clarification and appropriate correction are required.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kuechler et al and Purvis et al are pertinent to the use of a dilute propylene stream as feedstock for a polypropylene production process (note Keuchler at col.. 18, lines 18+ and col. 26, claim 45 and Purvis at col. 10, lines 15+).

Marker is pertinent to catalytic conversion of an oxygenate feedstock to hydrocarbons containing, *inter alia*, ethylene and propylene (note col. 4, lines 54+).

Claims 1-8 and 18-33 are allowable. Claims 9-17 would be allowable if amended or rewritten to overcome the rejection under 35 U.S.C. 112 and objection set forth in this Office action.

Art Unit: 1713

The following is a statement of reasons for the indication of allowable subject matter: the separating/recovering of an "intermediate grade propylene stream," as defined herein (e.g., page 4, parag. [0016]), from an olefin stream (claims 1 and 17) or an overhead distillation stream (claim 9) or a propylene separation system (claim 26) and contact thereof with a polypropylene-forming catalyst according to the instant process, is not disclosed nor fairly suggested in any prior art document(s) located or identified by the examiner as of the date of this Office action.
